

# MailFinisher

## Simplify mailing processes and security printing with sealed documents

**The MailFinisher is a heavy duty and versatile attachment for your printer that automates mailing processes and printing documents requiring security.**

Communication is the essence of business and, even in an age of increasing electronic exchange, paper is still an essential medium. Whether it is for marketing purposes or as part of your accounting procedures such as the production of invoices, payment advice notes or even cheques, an amount of your business depends on producing sealed mail. You rightly view your address and contact lists as an important resource, and have doubtless taken steps to maximise their usefulness to your organisation. But had you thought of using your printer to maximise the costs of you regular or special mailings?

The MailFinisher replaces the tedious folding, stuffing and sealing of mail, to streamline mail production processes, cutting up to 50% off your preparation costs.

## How the MailFinisher works

The MailFinisher attaches to your printer to produce an online sealing unit. The co-adhesive Print-to-Mail stationery is available in different formats, blank, pre-printed for use with common accountancy software, or customised for your specific business needs – including possibilities for return envelopes or detachable coupons.

As the printed page emerges from the printer, it is automatically inserted into the MailFinisher, 'Z' folded and sealed ready for distribution or mailing.

## What is Pressure Seal technology?

Pressure Seal technology provides the office environment with a whole new level of cost and manpower benefit. It could possibly be the single best investment a company can make in its distribution and print handling of secure documents.

Pressure Sealing uses laser compatible forms which have incorporated special glue patterns. The cohesive glue only becomes activated when subjected to extremely high pressure produced during the sealing process. The forms are folded by the Pressure Sealer and then pass through the sealing rollers which activate the glue. This changes the forms into extremely secure, tamper-proof mailers which are suitable for mailing or distribution without the additional expense of envelopes.

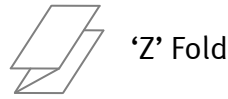

## Special features

- Automatic By-pass Tray**  
 An integrated imaging system detects unrecognised papers and double feeds, diverting them into the by-pass tray
- Manual Feeder**  
 A simple manual feeder allows the processing of single or damaged forms
- Revolutionary Design**  
 The folding unit slides out on glides to permit easy access to the pressure rollers for maintenance
- Wide Range of Compatibility**  
 Compatible with most laser printers that have a rear exit option

## Areas of application

- For regular accountancy or office mailings, such as invoices, statements, reminder notices, payment advice notes, cheque printing etc
- For marketing activities, such as flyers, or using detachable elements for distributing coupons, etc
- For secure printing – seal your sensitive information as it is printed

## Common fold types

'Z' Fold

Offset 'Z' Fold

'C' Fold

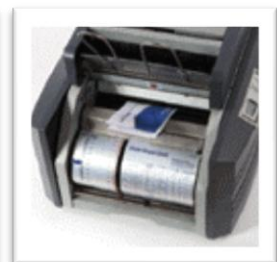

'V' Fold

## Specifications

Operating speed	Up 3,300 sheets per hour (as per LJ4350 up to 55ppm)
In-feed tray capacity	Up to 2000 sheets in printer trays
Fold plate adjustments	Manual adjustments in seconds
Paper sizes	A4 – 11" - 12" – 14" *
Paper weights	60gsm to 140gsm
Fold styles	V – Z – C fold capability *
Weight	42 Kgs
Manual feed	Yes
Counting	Digital batch counter
Noise level	50db approx.

\* 14" Z fold not available
