

Doc-Q-Manager

Document and Transactional *Print Queue Management*

Doc-Q-Manager explained

Doc-Q-Manager provides queue management control for volume printing operations. Printing operations will benefit by being able to receive and process more documents and transactional print with increased efficiency. Additional print work will be captured and processed without having to extend working hours or take on more staff.

What are the main functions of Doc-Q-Manager?

- * Copy, move, reprint and view print jobs to speed up processing time.
- * Automatically split colour and black & white pages to save the cost of printing the black and white pages on an expensive colour printer.
- * Impose / change the layout of the pages within a print job saving on page cost and additional imposition software.
- * Automatically batch and sort PDF's for faster printing and collating.
- * Split jobs across multiple printers to meet tight deadlines.

Part of the Doc-Q -Suite

Doc-Q-Manager - Doc-Q-Ticket - Doc-Q-Route

Doc-Q-Manager is the print room / reprographics queue management part of three main software solutions that build into a complete document and print control solution for your organisation.
