

AutoStore Express

Demand more from your Multifunctional Device – Speed up your day-to-day processes and become more efficient.

What is AutoStore Express?

As one of the most widely used capture platforms, AutoStore integrates with a wide variety of multifunctional devices and business applications. Using AutoStore you can expand the usability of your device by creating menus that make sense to the user.

AutoStore can process documents using its advanced text and barcode recognition capabilities, enhance the image quality, convert files into searchable PDF and route them into your company workflows, databases or business applications so it can be used and shared immediately.

AutoStore Express comes with a free server and is a device-only-license based version of AutoStore. Designed for building simple data-driven workflows, AutoStore allows customers to easily create searchable PDF files and distribute electronic documents all inside the server based workflow environment. AutoStore Express can be seamlessly upgraded to more sophisticated versions of AutoStore to give you more advanced capture workflow features.

AutoStore Express features and benefits:

- ✓ Compact download
- ✓ Free-Server/Device-Only-License
- ✓ Up and running in less than 15 minutes with any device of your choice
- ✓ Send documents directly from source to destination in seconds
- ✓ Convert documents to searchable PDFs or enforce other business rules automatically
- ✓ Add additional devices in minutes
- ✓ Define how you like your documents be processed from MFP's using graphic flow chart.
- ✓ Seamless upgrade path to AutoStore Server
- ✓ Complete SharePoint and IBM Lotus Notes integration as standard features.

AutoStore Express is the AutoStore document capture and routing solution for entry level deployments.

Based on the award winning AutoStore platform, AutoStore Express is the flexible entry into the world of automated document management, designed to address the needs of small businesses or departments that require a comprehensive, scalable and easy to use solution to deliver the business essentials for the day-to-day operations. AutoStore Express is easy to use for the end user and easy to maintain for the administrator.

What can AutoStore Express do for you?

AutoStore Express lets you unleash the full power of your devices and goes far beyond the basic features.

Using AutoStore you can:

- Send To Folder or FTP
- Allow OCR processing of your documents directly from the device
- Communicate faster through the integration of your MFPs into your network fax servers
- Send documents as searchable PDF files to your customer or partners
- Integrate paper into IBM Lotus Notes or Microsoft SharePoint Services and Portal
- Route documents into the users home directories on your file servers

Many multifunctional devices already offer basic features such as Send To Folder, Email or FTP, but by looking closer at these features you will see the following differences:

Send To Folder:

A basic feature delivered by most MFD's is send to folder, but most devices can only route to a defined folder which is linked to a key. That means contracts will end up in one defined folder.

AutoStore Express will create a form on the device, which allows you to enter or pick the customer and choose a contract type. The contract will then be routed directly into your existing folder structure, creating all necessary parts and renaming the file dynamically afterwards.

Send To Home Directory:

This feature is amongst the most needed functions in most organisations that the basic device can not really deliver. AutoStore Express provides its own authentication to have users log into the device – based on this information, AutoStore Xpress server asks the domain controller for the user's home directory and sends the file into that folder.

Send To Email:

This bread and butter feature has been available for a long time on MFP devices in limited form. AutoStore Express can be programmed to display data from the backend applications as well as the LDAP server and places the files in the user outbox in Outlook. Additional features include archival into network drives prior to email or printing hard copy files based on email destination.

OCR:

Since OCR is a very power consuming task, it can not be delivered directly from the device. AutoStore Express has a powerful OCR engine that allows almost anything you need to be configured in an OCR Engine. This includes the capability of using dictionaries to increase OCR quality, OCR teaching and generating over 10 different file formats including PDF, MS Word, MS Excel, HTML, MS PPT and many more. Using a server based OCR engine you can see the power of conversion and the impact of savings.

Send To Application:

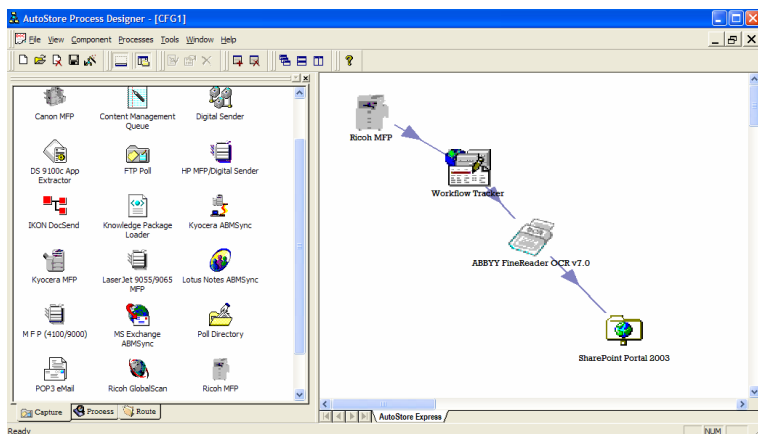

AutoStore Express integrates directly into the most popular business applications such as: Lotus Notes and Microsoft SharePoint Services/Portal. AutoStore Express routes documents and values directly into the database or document library in these systems by hitting the prompts on the device panel.

The way up

With the growth of your business, you will eventually need additional functionalities from your solution. One of the big advantages of AutoStore Express is that it can be easily upgraded to AutoStore. With the AutoStore server you can recognize barcodes, enhance, convert and compress images and route them to almost any document management solutions.

Easy to use

One essential part of all NSi products is the ease of use. AutoStore Express is configured through a easy to use Process Designer, allowing to create your workflows using drag and drop. Since all menus are generated by the administrator they can also be created in the way, they make sense to the end user - regarding language and terms.

Features of AutoStore Express:

- ✓ Capture: Multifunctional devices with a direct integration, mostly with authentication
- ✓ Process: Abbyy FineReader OCR, Workflow Tracker (integration into accounting systems) Home Directory look-up component
- ✓ Route: Send to Folder, FTP, Email, Lan Fax, Notes Databases and SharePoint
- ✓ Drag and Drop Workflow designer

Supported devices:

- Canon MEAP 2.0 device IR xx70
 - HP MFP 4100,9000; 4345, 9040, 9050, 4730, 9500
 - Kyocera 3035, 4035, ...
 - Ricoh GlobalScan 1.4, 1.5, 2.0 connected devices
 - Ricoh SDKJ 1.2 and above supporting devices
 - Xerox WorkCentre & DocuCentre devices
- Some device integration might require additional components from the hardware manufacturer.

Hardware Requirements:

- Windows 2000, XP, 2003 Server (latest Service Pack)
- CPU 1 Ghz. (2 Ghz or more recommended)
- Ram 512 MB – 1 GB recommend
- 5 GB free hard disk space for processing
- TCP/IP network connection
